

# Jake Bown

I'm a full stack developer based in the UK; I am passionate about code, new technologies and creating exciting solutions to problems. I have worked on some really cool projects including **Jaguar Land Rover**, **Pearson**, **Wetherspoons** and been part of some awesome London based start-ups. My Youtube channel, **Helpy Code** is introducing thousands of people to practical web programming, exploring the foundations of PHP.

## Education.

2013 - 2015

University of Greenwich.

BSc Web Development Honors 2:1

2018 2017 2016 2015 2014 2013 2012 2011 2010 2009 2008 2007

## Experience.

2017 - Present

Yarrington Limited

Full Stack Developer

2015 - 2017

Guestline Limited

Backend PHP Developer

2015

Connect Group

Freelance Front end Developer

2013 - 2015

Press Loft Limited

Freelance Full Stack Developer

2008 - 2015

Self Employed

Full Stack Developer

## Technologies.

### Backend

PHP, SQL, Python, Apache, Linux, SSH, Jenkins, Composer, Mongo, Node, GIT, Slim, Redis, MVC, OOP, Gun.js, Codelgniter, Socket.io

### Frontend

Javascript, jQuery, Angular.js, CSS, SCSS, HTML5, Bower, Grunt, Gulp, Bootstrap, AJAX, Cordova, Ionic Framework.

### Software

Sketch, Atom, Photoshop, Illustrator, Sublime Text, Vim, Postman, Ubuntu Server, Mac, Kraken, Slack, Windows.

## Recent Projects.

### Boilerplate ([jakebown.com/labs/boilerplate](http://jakebown.com/labs/boilerplate))

Boilerplate, a resourceful tool for Frontend Development, generates libraries and frameworks as packages for download; containing a **HTML5** compliant index page linking to all of your resources, it makes setup faster and more efficient. Boilerplate is made using **Codelgniter** for views, **ZipArchive** for compilation and **CDNJS REST-API** for content.

### AppCreator.site

App Creator is a SaaS project that allows anyone to turn their responsive website into a mobile app in under 5 minutes, signed and ready to upload to the Play Store. This site makes use of **Apache**, **SQL**, **Slim Framework**, **Jenkins**, **Mailgun**, **Cordova**, **Bash** and **Gradle** on a LAMP stack.

Please view my Github for more projects.
